Gurgaon, India | Open to relocate, onsite, hybrid or remote | **Available to join immediately**

PROFESSIONAL SUMMARY

Senior Frontend Engineer with **7 years** building React and Next.js applications for SaaS, fintech and data-intensive products. Built **3 React products** end to end as sole frontend engineer, and set up a Next.js platform serving **thousands of vendors**. Strong in TypeScript, Redux, React-Query and performance work, with **2 production LLM chat features**. Leads developers, plans directly with clients, and uses AI-assisted development with engineering judgment in the lead.

TECHNICAL SKILLS

Frontend: React, Next.js (Pages Router, SSR/SSG), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/SASS

State and Data: Redux, React-Query, Context API, custom hooks, REST APIs, WebSockets

Architecture and Performance: Frontend architecture, dynamic forms, React.memo, useMemo, useCallback, React.lazy, code and bundle splitting, virtualization, server-side pagination, API caching, Lighthouse, Chrome DevTools

UI: Tailwind CSS, Material UI, Bootstrap, DevExpress (DevExtreme), TinyMCE, AG-Grid Enterprise, AG Charts, design tokens, responsive and mobile-first design

Auth, Payments, Cloud: JWT, OAuth 2.0, Google Sign-In, RBAC, Stripe, pre-signed uploads to AWS S3, Azure Blob, Google Cloud Storage, Cloudinary

AI Engineering: LLM features (OpenAI, Anthropic, streaming chat), Claude Code, Cursor, GitHub Copilot, Codex, v0

DevOps and Tooling: GitHub Actions, CI/CD, Docker, Git, ESLint, Prettier, Webpack, Babel, Postman, Jira, Linux, VS Code

Leadership: Team leadership, code review, mentoring, requirements analysis, estimation and sprint planning, client communication

Also: Angular (v7 to v20), standalone components, OnPush, RxJS, NgRx, NGXS

PROFESSIONAL EXPERIENCE

Finoit Technologies – Noida, India (Remote) — July 2019 – July 2026

Senior Software Engineer — January 2023 – July 2026

CCM – Contract and Vendor Management Platform

React, Next.js, Redux, TypeScript, WebSockets

- Set up the production **Next.js** codebase (SSR/SSG) from client-provided AI-generated UI (v0), with architecture, tooling and boilerplate the team built on.
- Platform manages **thousands of vendors** for about **100 users**.
- Reviewed **2 developers'** code, then stabilized a codebase where forms broke almost daily; **errors became rare**.
- Built **AI Sync**, a streaming LLM chat for querying and summarizing contracts, with markdown answers, retry and auto-reconnect; plus the User module.
- Built forms with nested dependent fields and data tables, using React.memo, useMemo, useCallback and lazy loading.

Paper Tiger – Academic Research and Writing Platform

React, Redux, DevExpress, TinyMCE, Google Cloud

- **Sole frontend engineer** from empty repo to production: architecture, routing, error handling, API layer and OAuth / Google Sign-In.
- Built all **5 modules** (Outliner, Reader, Explorer, Builder, Writer) with a Kanban board and TinyMCE editor.
- Built PDF upload, citation management and annotation; handled about **2 MB of JSON per paper** on the client with custom hooks.

Block Power – Community Engagement and Voting Platform

React, Redux | Client: Harvard professor

- Owned the frontend for a mobile-first app with about **250 users**: referrals, points, rewards and voting.
- Built role-based access for multiple user types in one app; estimated work and joined client calls directly.

DDMind – Private Equity Research and Investment Analysis Platform

Angular 16 to 20, AG-Grid Enterprise, AG Charts, RxJS, NGXS, WebSockets

- Led **2 developers**; **cut grid load time by 8–10 seconds** on **17,000+ row** tables (20,000+ records) with server-side pagination, virtualization and page caching.
- Built a **streaming LLM chat** with switchable OpenAI and Anthropic models, and made **30–40 API-configured tabs** open instantly with background prefetching.
- Proposed and led a framework upgrade (Angular v16 to v20) for the client's certification, cutting bundle size **12%** and build time **8%**.
- Moved **20,000+ financial records** out of Excel into the app, and reverse-engineered a market-data flow so the backend could reuse the same APIs.

Engineering Leadership & Practices

- **Owned design decisions** while using AI coding agents (Claude Code, Cursor, GitHub Copilot, Codex) to speed up scaffolding, refactors and debugging; reviewed and tested every change.
- Set up AI rules files and shared prompts, and coached my team to use them well.
- Added quality gates on DDMind and CCM: ESLint and Prettier on pre-push, the same checks in GitHub Actions, and Docker dev setups.
- Built shared components and design tokens on every project; **mentored 6+ engineers** across teams.

Software Engineer January 2022 – January 2023

Qbench – Laboratory SaaS Customer Portal and Billing

React, Redux, React-Query, Stripe

- Built a **config-driven engine** that renders forms and tables from backend settings, so admins customize the portal **without code changes**.
- Built **Stripe** subscriptions and billing, and direct uploads to Azure Blob Storage via pre-signed URLs.
- Also on Together Now (React): added commenting and approve/reject workflows.

Software Developer (joined as Trainee) July 2019 – January 2022

Youxta | Ignite | Envy Pet Care

Angular 7, 8 and 10, NgRx, RxJS, AG-Grid, Stripe

- Built a lawyer-hiring platform with Stripe payments and booking, a drag-and-drop career-page builder, and a pet-booking app with AG-Grid and Gravity Payments.
- Contributed to an Angular v6 to v8 upgrade under a senior engineer.

EDUCATION

B.Tech, Computer Science & Engineering (Lateral Entry) 2014 – 2017
Maharaja Surajmal Institute of Technology, New Delhi

Diploma, Computer Science & Engineering 2010 – 2013
Ambedkar Polytechnic, New Delhi
